

Is it just  
about money?

## Private Static Fields (Stage 3)

<https://github.com/babel/babel/pull/8205>, by Bloomberg

JavaScript

 Copy

```
class C {  
  static #foo = "bar";  
}
```

Thanks to [Rob](#), [Robin](#), [Robert](#), [Tim](#), [Kubilay](#) and the team at [@Bloomberg](#) for implementing this new feature and [Justin](#) for the review! I believe this is the first time we've had a company sponsor implementation work for a proposal and looking forward to more from them! If you want to see proposals improve, move forward, or have implementation experience in the wild then consider sponsoring work on it for Babel in addition to just going to TC39.
