In case you missed it, I've gone full-time educator!

Big Announcement: I'm a full-time educator! 🧑🏫

After years of teaching on the side, I've decided to take the plunge and go full-time as an educator!

October | Update README - Issue #17 | noopkat/mxchip-gifs: A website for sharing GIFs | arduino leonardo flash hex not | unitTests/App Component - 8 | Pull Requests - noopkat/electr...

ridomin commented 3 days ago

Following the README instructions I found the next issues:

1. Specify the ArduinoJson version to use, looks like this requires 5.x (or update to the latest). Also make a note that after install users must *include library*
2. VSCode shows a warning in the last line `delay(66)` with the next message expression preceding parentheses of apparent call must have (pointer-to-) function type
3. Dockerfile is not used. Is it needed?
4. I see a bunch of JS code to parse the GIF, I assume this is only needed to show the expected GIF in the page, but if it's not really needed for the MXChip sample I'd suggest to remove it from the sample to avoid webpack and other non-related technologies.

this repo.

2. This warning is essentially harmless but thanks for pointing it out. The Arduino ecosystem sometimes confuses certain language extensions.
3. The `dockerfile` is optional, and is for the purpose of deploying the companion website (the server that sends the gifs to the device) using Docker if someone is so inclined |

Attach files by dragging & dropping, selecting or pasting them.
